AREAS OF INTEREST

✓ Programming :

Coding allows me to solve complex problems creatively, and I am always eager to learn new languages and technologies.

✓ Cyber Security:

I am passionate about protecting digital information and systems and Cybersecurity fascinates me because it involves solving complex security challenges.

MINI PROJECTS

➤ A PROJECT FOR RAILWAYS MANAGEMENT SYSTEMS (JAVA+FILES):

The Railway Management project is a robust system designed for checking PNR statuses and booking train tickets. It includes a mock database of bookings and a user-friendly interface for passengers to check their PNR status, book tickets, and access contact information. Users can enter their details, make online payments, and receive unique PNR numbers. The system validates transactions, assigns seat numbers, and generates booking records, storing details in files categorized by coach types (Sleeper, Chair, AC). This project aims to streamline railway operations, enhance passenger convenience, and ensure efficient management of ticketing and booking processes. I have used files for holding the information for the passengers booked details .

➤ A Project for Library management:

I developed a C program for an e-library system designed to efficiently manage book information. Implemented using structures, the program allows users to add, display, and list books by author, providing a streamlined interface for basic library management tasks. The system includes features for storing book details such as title, author, pages, and price, enhancing user interaction through a menu-driven interface.
